

ABSTRACT OF THE DISCLOSURE

A digital still camera easily adds information relating to a pick-up time to a picked-up image. The digital still camera is connected to Internet through communication function of a cellular phone based on a download time interval of each URL and obtains an HTML file from a URL specified by information downloaded from the Internet. When an image is picked-up and stored in a flash memory as a JPEG file, the obtained HTML file is written into a comment region of the JPEG file.
